New test Benchmarks Please add your or test your configuration . To help fellow.. Fix the crashing.. I had a lot of issues viewing my results online. It wasn't intuitive at all.. This is a great tool to test the performance of your PC. The benchmarking tools in this software really push your computer to its limits. The software is easy to use and doesn't take a brain surgeon to understand. Just pick what level of computer you think you have and the software will tell you if you have a decent rig. You can check your scores against other people from around Steam which is fun. I like it that you can compare your system overtime to see where it is lacking or what needs to be improved. This software has helped me to understand my system more each time I use it. This has helped me to understand my RAM frequencies and see that they were not running at the same frequency which helped me save alot of money. I really recommend this software to any PC guru that wants to get the most out of their system. I would first try the DEMO first since you can get a basic idea of what your computer can do from that but if you want to mess with settings then get the full version of this software. I wouldn't recommend this at full price, make sure to wait till this one goes on sale.. This is a great tool to test the performance of your PC. The benchmarking tools in this software really push your computer to its limits. The software is easy to use and doesn't take a brain surgeon to understand. Just pick what level of computer you think you have and the software will tell you if you have a decent rig. You can check your scores against other people from around Steam which is fun. I wouldn't recommend this at full price, make sure to wait till this one goes on sale.. would be nice if this had a full set of features other than benching the video how about adding some tools or utilites to speed up the PC what you pay for in this really should have more in the app another product that you really dont need bad for me im stuck with it find a free version. A now outdated piece of benchmarking software. Was good at the time. Due to it's no longer relevant standing I cannot recommend this benchmarking software.. Fix the crashing.. Great Direct X 11 Benchmark worth the money. I have previously used the free version, but for \$10.00 this is worth the moeny.. would be nice if this had a full set of features other than benching the video how about adding some tools or utilites to speed up the PC what you pay for in this really should have more in the app another product that you really dont need bad for me im stuck with it find a free version

Cuit Free to play! : Hello everyone! I have decided to make Cuit Free-To-Play now, as I sadly have no time left supporting this application anymore (for quite a while already, actually). Hope some of you still find joy in solving the puzzles. I admit that the UI is to be improved (to say the least), but yeah. Maybe one day I'll have the time to get back to it or make a sequel with more of a budget (or rather any budget at all).. Update 1.12: Copy & Paste / Selection Mode and UI Improvements : Update 1.12: New features: Selection mode in editor Copy and Paste (Duplicate) selections Delete selections New nano-splitter segment allowing for more flexible cable placement Updated: UI improvements (Will be improved more over time - I noticed the problems and suggestions from the community concerning the UI) Tool-Tip improvements: The tool-tips while hovering a gate have been improved upon community feedback Bugfixes: Cable placement in editor now works in both ways. Once triggering a bomb (and turning it off again) in build mode won't blow up the level any more when turning the build mode off.. Possible UI and resolution fix : Hello everyone! I heard a common problem are resolutions different from 1080p monitors. I tried to implement a fix / patch for this problem, and that has been released now.
